Problem setup

Does a Feynman-Kac functional solve Dirichlet problem?

1. Feynman-Kac functional is

$$v(x) := \mathbb{E}\Big[\int_0^{\zeta} e^{-\lambda s} \ell(X(s)) ds + e^{-\lambda \zeta} g(X(\zeta)) \Big| X(0) = x\Big]$$

2. Associated Dirichlet PDE is

$$-\mathcal{L}u(x) + \lambda u(x) - \ell(x) = 0 \text{ on } O, \text{ with } u = g \text{ on } O^c.$$

(Q). Does v solve PDE?

X is Cádlàg Feller with generator \mathcal{L} , i.e. $X \sim \mathcal{L}$;

O is a connected bounded open set in \mathbb{R}^d ;

 ζ is exit time from \overline{O} , denoted by $\zeta = \tau_{\overline{O}}(X)$.

See for traditional time-dependent Feynman-Kac formula at B Oksendal. Stochastic differential equations. 2003

Example 1 Solvability question

Let
$$O = (0, 1), X \sim \mathcal{L}u := \frac{1}{2}\epsilon^2 u'' + u'$$
 and $\zeta = \tau_{\overline{O}}(X)$.

(Q) Does

$$v(x) = \mathbb{E}\Big[\int_0^{\zeta} e^{-s} 1 ds \Big| X(0) = x\Big],$$

solve ODE below?

$$-u' - \frac{1}{2}\epsilon^2 u'' + u - 1 = 0$$
 on O , and $u(0) = u(1) = 0$.

▲□▶ ▲圖▶ ▲臣▶ ★臣▶ = 臣 = のへで

Def A function $u \in C(\overline{O})$ is said to be a viscosity solution, if

- 1. *u* satisfies the viscosity solution property at each $x \in O$
- 2. u = g at each $x \in \partial O$.

Example 1 Answer: Yes iff $\epsilon > 0$.

If $\epsilon = 0$, the explicit computation of

$$v = -e^{-1+x} + 1$$

does NOT satisfy the boundary condition u(0) = 0, while it satisfies u(1) = 0.

i.e. v loses its boundary at 0.

$$\begin{split} X &\sim \mathcal{L}u := \frac{1}{2} \epsilon^2 u'' + u' \\ v(x) &= \mathbb{E} \Big[\int_0^{\zeta} e^{-s_1} ds \Big| X(0) = x \Big], \\ -u' &- \frac{1}{2} \epsilon^2 u'' + u - 1 = 0 \text{ on } O, \text{ and } u(0) = u(1) = 0. \\ \text{If } \epsilon > 0, \text{ then} \\ v(x) &= 1 + \frac{(1 - \epsilon^{\lambda_1}) e^{\lambda_2 x} + (e^{\lambda_2} - 1) e^{\lambda_1 x}}{e^{\lambda_1} - e^{\lambda_2}}, \end{split}$$

where

$$\lambda_1 = \frac{\sqrt{1 + 2\epsilon^2} - 1}{\epsilon^2}, \text{ and } \lambda_2 = \frac{-\sqrt{1 + 2\epsilon^2} - 1}{\epsilon^2}.$$

Example 1

Literature review: Sufficient condition for solvability

[BS18] *v* solves PDE if all points on ∂O is regular to \bar{O}^c .

In Example 1,

$$O = (0, 1), X \sim \mathcal{L}u = \frac{1}{2}\epsilon^2 u'' + u'.$$

- If $\epsilon > 0$, then both 0 and 1 are regular;
- If ε = 0, then both 1 is regular, but 0 is irregular. Thus, ν(0) does not satisfy the boundary condition.
 But, ν satisfies viscosity solution property at x = 0, which means ...

[BS18] E Bayraktar, Q Song, Solvability of Dirichlet Problems, SICON 2018. x is regular to \bar{O}^c w.r.t. \mathcal{L} , if $\mathbb{P}^x(\zeta = 0) = 1$.

Example 1

Definition of the viscosity property

In Exm 1 with $\epsilon = 0$,

- x = 0 is irregular and satisfy viscosity solution property.
- Therefore, v is a generalized viscosity solution in the sense of ...

Supertest functions: $J^+(u, x) = \{\phi \in C_0^{\infty}(\mathbb{R}^d), \text{ s.t. } \phi \ge (uI_{\bar{O}} + gI_{\bar{O}^c})^* \text{ and } \phi(x) = u(x)\}.$ Subtest functions: $J^-(u, x) = \{\phi \in C_0^{\infty}(\mathbb{R}^d), \text{ s.t. } \phi \le (uI_{\bar{O}} + gI_{\bar{O}^c})^* \text{ and } \phi(x) = u(x)\}.$ With $G(\phi, x) = -\mathcal{L}\phi(x) + \lambda\phi(x) - \ell(x)$, consider

$$G(u, x) = 0$$
, on O and $u = 0$ on O^{c} .

1. $u \in USC(\bar{O})$ satisfies the viscosity subsolution property at some $x \in \bar{O}$, if

$$G(\phi, x) \leq 0, \ \forall \phi \in J^+(u, x).$$

2. $u \in LSC(\overline{O})$ satisfies the viscosity supersolution property at some $x \in \overline{O}$, if

$$G(\phi, x) \ge 0, \ \forall \phi \in J^{-}(u, x).$$

▲□▶▲□▶▲□▶▲□▶ □ のQで

Main objective

Definition of the generalized viscosity solution

Def. A function $u \in C(\overline{O})$ is said to be a *generalized viscosity solution*, if

- 1. At each $x \in O$, *u* satisfies the viscosity solution property
- 2. At each $x \in \partial O$, *u* satisfies either the viscosity solution property or u = g

Goal Is v a generalized viscosity solution of PDE?

$$v(x) = \mathbb{E}\left[\int_0^{\zeta} e^{-\lambda s} \ell(X(s)) ds + e^{-\lambda s} g(X(\zeta)) \Big| X(0) = x\right]$$

- $\mathcal{L}u(x) + \lambda u(x) - \ell(x) = 0 \text{ on } O, \text{ with } u = g \text{ on } O^c.$

A restatement of generalized viscosity solution

Boundary decomposition is a part of unknown

A function $u \in C(\overline{O})$ is said to be a generalized viscosity solution, if *u* satisfies the viscosity solution property at each $x \in \overline{O} \setminus \Gamma_{out}$, where

$$\Gamma_{out} = \{ x \in \partial O : u = g \}.$$

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ ▲ □ ● ● ● ●

First sufficient condition If $v \in C(\overline{O})$, then ...

Lem If $v \in C(\overline{O})$, then v is a generalized viscosity solution of PDE with

 $\Gamma_{out} \supset \overline{O}^{c,*} \cap \partial O.$

Rmk $\bar{O}^{c,*}$ is fine closure of \bar{O}^c , which means ...

Suppose $v \in C(\overline{O})$.

- If x ∈ ∂O and P^x(ζ > 0) = 1, then v satisfies viscosity solution property: Similar to above, take Ito's formula on φ(X^x) for test functions φ.
- If $x \in \partial O$ and $\mathbb{P}^{x}(\zeta > 0) = 0$, then v(x) = g(x) by definition.
- $x \in \partial O$ and $\mathbb{P}^{x}(\zeta > 0) \in (0, 1)$ is not possible by Blumenthal 0-1 law.

Regularity and Fine topology

Facts on fine topologies refer to Section 3.4 of [CW05].

- A point *x* is regular (w.r.t. \mathcal{L}) for the set *B* if $\mathbb{P}^{x}(\tau_{B^{c}} = 0) = 1$;
- \triangleright *B^r* denotes the set of all regular points for *B*;
- $B^* = B \cup B^r$ is called fine closure of *B*;
- A set *A* is finely open if $\mathbb{P}^x(\tau_A > 0) = 1$ for all $x \in A$.

[CW05] K Chung and J Walsh. Markov processes, Brownian motion, and time symmetry, Springer 2005

In Example 1,

$$O = (0, 1), X \sim \mathcal{L}u = \frac{1}{2}\epsilon^2 u'' + u'.$$

▲□▶▲□▶▲□▶▲□▶ □ のQで

Set $B = \overline{O}^c$ and $B^c = \overline{O}$. If $\epsilon > 0$, then $B^r = B^* = \overline{B}$ and $\Gamma_{out} \supset \{0, 1\}$; If $\epsilon = 0$, then $B^r = B^* = B \cup \{1\}$ and $\Gamma_{out} \supset \{1\}$;

Find an example where B^r is a proper subset of B^* .

Example 2 $v \notin C(O) \subset C(\overline{O})$

• Let $O = (-1, 1) \times (0, 1)$, $X \sim \mathcal{L} = \partial_{x_1} + 2x_1 \partial_{x_2}$.

Does

$$v(x) = \mathbb{E}\Big[\int_0^{\zeta} e^{-s} 1 ds \Big| X(0) = x\Big]$$

solve PDE in general viscosity sense?

$$-\partial_{x_1}u(x) - 2x_1\partial_{x_2}u(x) + u(x) - 1 = 0$$
, on O , and $u(x) = 0$ on O^c .

(A) No. (Q) When is $v \in C(\overline{O})$?

Particularly, $v(x) = 1 - e^{-\zeta^x}$ is discontinuous at every point on the curve $\partial O_1 \cap \partial O_3$, where

$$\begin{split} \zeta^x &= -x_1 + \sqrt{1 - x_2 + x_1^2}, \ \forall x \in \mathcal{O}_1 := \{x_2 \ge x_1^2\} \cap \bar{\mathcal{O}}, \\ \zeta^x &= 1 - x_1, \ \forall x \in \mathcal{O}_2 := \{x_2 < x_1^2, x_1 > 0\} \cap \bar{\mathcal{O}}, \\ \zeta^x &= -x_1 - \sqrt{-x_2 + x_1^2}, \ \forall x \in \mathcal{O}_3 := \{x_2 < x_1^2, x_1 < 0\} \cap \bar{\mathcal{O}}. \end{split}$$

Main result

Recall $\hat{\zeta} = \tau_O(X)$ and $\zeta = \tau_{\bar{O}}(X)$.

Thm If $\mathbb{P}^{x}(X(\hat{\zeta}) \in \overline{O}^{c,*}) = 1$ for all $x \in \overline{O}$, then v is a g.v.s. of PDE with $\Gamma_{out} \supset \overline{O}^{c,*} \cap \partial O.$

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ - 三 - のへぐ

In particular, if $\overline{O}^{c,*} = O^c$, then $\Gamma_{out} = \partial O$ and v is a v.s.

Why does Example 2 violate the condition?

Preliminaries on α -stable process

Suppose

- $J \sim -(-\Delta)^{\alpha/2}$ is an α -stable process for some $\alpha \in (0,2)$;
- $dX_t = bdt + \sigma dJ_t$ is $X \sim \mathcal{L} := b \cdot \nabla |\sigma|^{\alpha} (-\Delta)^{\alpha/2}$ for some $\sigma > 0$;
- *O* be a bounded open set satisfying exterior cone condition.

Then, all points in O^c is regular for \overline{O}^c (i.e. $O^c = \overline{O}^{c,*}$) iff

either $\alpha \geq 1$ or b = 0 holds.

Nonlinear non-stationary equation

HJB equation

Consider solvability of, for $\gamma \geq 1$

$$-\partial_t u - |\nabla_x u|^{\gamma} + (-\Delta_x)^{\alpha/2} u + 1 = 0 \text{ on } Q_T, \text{ and } u = 0 \text{ on } \mathcal{P}Q_T.$$

It is HJB equation, since

• If $\gamma = 1$, then write $-|\nabla_x u| = \inf_{b \in B_1} (b \cdot \nabla_x u)$,

• If $\gamma > 1$, then it is KPZ equation, also we write

$$-|\nabla_x u|^{\gamma} = \inf_{b \in \mathbb{R}^d} (-b \cdot \nabla u - L(b))$$

with Lengendre transformation *L* of the function $F(x) = |x|^{\gamma}$

(Rmk) See control theory and HJB formulation to the references below

Nonlinear non-stationary equation

Reducing solvability question by (CP + PM)

Consider solvability of, for $\gamma \geq 1$

 $-\partial_t u - |\nabla_x u|^{\gamma} + (-\Delta_x)^{\alpha/2} u + 1 = 0 \text{ on } Q_T, \text{ and } u = 0 \text{ on } \mathcal{P}Q_T.$

We assume that comparison principle and Perron's method hold:

► (CP+ PM) If there exists sub and supersolution, then PDE is uniquely solvable.

(Rmk) Existence of sub and supersolution may not be trivial, Exm 4.6 of [CIL92].

 $\overline{Q_T := (0,T) \times O, \mathcal{P}Q_T := (0,T] \times \mathbb{R}^d \setminus Q_T.}$

[CIL92] M Crandall, H Ishii, and P Lions. User's guide to viscosity solutions, Bull. AMS.

Nonlinear non-stationary equation

Existence of sub and supersolution

We want sub and supersolution of

$$-\partial_t u - |\nabla_x u|^{\gamma} + (-\Delta_x)^{\alpha/2} u + 1 = 0 \text{ on } Q_T, \text{ and } u = 0 \text{ on } \mathcal{P}Q_T.$$

Summary

▲ロト▲御ト▲注ト▲注ト 注 のへぐ

Summary

- We prove that Feynman-Kac functional is a generalized viscosity solution of PDE under some conditions; It's the first attempt to connect generalized viscosity solution with fine topology.
- This can be applied to answer the existence of the viscosity solution of non-stationary Dirichlet problem;
- This idea can be extended to the solvability question by changing time into subordinate process.
- The discount rate can be removed if the integrability condition is added;
- Together with (CP + PM), this answers solvability questions for a class of nonlinear equations.
- Yet, we do not know if nonlinear Feynman-Kac functional is the Perron's solution.
